Its total description,

Our team will respond within 24 hours.

In this basic workflow, user fills the form, we can also integrate this form in any website or app, but we use basic form now, then user information will clean and finds that is these are clear and correct email to send the email; after getting the data, we are storing this data in the google sheet and at last the user will receive the confirmation email in which the user confirms his/her form that has been submitted. So, this is very simple and basic workflow.

It automates the getting and storing information of user in database and sending the confirmation email. So, this is very best automation to automate this process.
